Design

Designs for the future

1. Offering affordable quality designs so you can start generating power and reducing costs.
2. Constantly considering how long the system will last we try to find the balance between cost and longevity.
3. Preparing designs for future technology with battery storage and solar automation in mind.

Install

Courteous Installation

1. 10 Spare roofing tiles provided
2. Keeping quality tiles under your solar system for longevity
3. Using quality Decktites to seal the penetration through the roof
4. Installation time can be 1-2 days depending on the situation
5. Quality panels selected to withstand the test of time
6. Quality inverter to power your home

Support

Our Care for you

1. Available after the installation to answer questions about your new technology
2. Monitoring for the first 2 years to make sure your getting value from your system

Our Offer

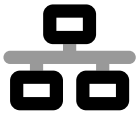

1. Designs to match your usage needs

2. Leak Free Installation under the solar Panels

3. Solar Panel clear coat, for self cleaning

4. Setup of Solar Inverter monitoring

5. Support included for 2 years!

Our Support

Included Annual Checks for first 2 years

- 1. Solar Panel Cleaning**
- 2. Inverter/system Performance Check**
- 3. Software update & Network Connection**
- 4. Check Inverter Connection to the Internet**

Ongoing Support

- 1. Priority Field Support**
- 2. Phone Support**
- 3. Solar Monitoring *if supported by your
inverter**

Save Money with Technology

Energy Saving tips

Self Checks if you can see the system from the ground

Check your inverter for the following signs:

1. Visually looks discoloured or the display isn't working
2. Wiring inputs are discoloured or look burnt
3. There is enough ventilation around the inverter to allow for air flow

Solar panel checks from the ground:

1. No signs of large bird dropping build-up
2. Low levels of dust without clay like build-up (if you can't see the solar panel below it need cleaning)
3. No wiring touching the roof
