INSULATION

How to save money and energy with insulation

Call: 0488811419

Insulation Benefits

Do you FREEZE when you wear just a T shirt and shorts in winter?

This is what most Australian homes are like right now!

Usually a thin layer spread over the roof space or filled with the incorrect R rating of insulation

Is it worth the cost to rectify?

Heating and cooling your home is one of the most expensive forms of energy use today! By trapping the hot/cool air within the space you would like to keep at a set temperature helps your heating or cooling system from running all day, hence the savings and creature comforts of keeping the room temperature longer.

Just like your body shivering and using energy to keep warm, your heating and cooling system is under constant strain to keep the room temperature regulated, take the strain from the system and save money in running costs, summer and winter!

How to Save Energy!

1. Simply have your roof space checked for peace of mind
2. If needed have the old insulation removed, this could help remove smells, mould and rodent nests.
3. Have you electrical wiring rectified and made safe before new insulation installed.
4. Have the required amount of insulation installed with R4 insulation
